

Life Without Electricity

We rely on electricity every day. Electricity provides us with the energy to do many things. We have appliances and machines that change electrical energy into other forms of energy, and then they do work for us.

1. What would life be like if the power was turned off and there was no electricity? Would you be able to survive? Why or why not?

2. List 10 electronic items that you think would be difficult to live without.

3. Look at your list above. Which five items do you think you need to survive? Explain and give reasons for each item.

4. Describe how your life would be different without electricity.
